

Off-grid Water Pumping with Morningstar TriStar MPPT 600V Controller with DC Transfer Switch

Notes:

1. Controller's manual switch is set to Grid for pumping or Controller ON for battery charging.
2. Maximum input voltage is 525V or V(pump max).
3. Minimum input voltage is 100V or V(pump min).
4. Level detector sends signal to automatically shut off pump when tank is full.
5. [Click here](#) for more product details.

*Controller is designed for 48 V battery systems, but can be custom programmed for other battery voltages.
